EnSite Safari Suite[®] 4 Passes Platform Test

Independent Testing Confirms Viability for Microsoft Windows[®] /SQL Server[®] 2005

As part of its program of continuous product and technology improvements, EnSite announced today that its EnSite Safari Suite[®] 4 product has passed independent platform testing for Microsoft Windows[®] Client and Microsoft SQL Server[®] 2005. The platform test confirmed that EnSite meets the certification requirement for ISV / Software Solution Competency of the Microsoft Partner Program. Specifically, testing was performed for the following two sets of criteria.

Microsoft Windows Client

This tests the application for five fundamental requirements and one elective requirement to determine whether the application is viable for use with the Windows[®] operating system. The following criteria were satisfied by EnSite Safari Suite[®] 4:

1. Executes on Microsoft Windows XP and maintains stability while performing primary functionality
2. Uses Windows Resources (heaps, page heaps, locks, and handles) appropriately
3. Does not attempt to replace files protected by Windows File Protection
4. All device or filter drivers installed by the application are digitally signed by Microsoft WHQL
5. All kernel-mode drivers installed by the application pass Windows driver verification
6. Remains stable while performing Fast User Switching

Microsoft SQL Server:

This tests the application for two fundamental requirements to determine whether the application is viable for use with Microsoft SQL Server. (SQL Server 2005 was used to perform the test.) The following criteria were satisfied by EnSite Safari Suite[®] 4:

1. Supports ADO, ADO.NET, OLE DB, ODBC, or JDBC to connect to SQL Server 2005
2. Supports SQL Server Authentication or Windows Authentication

Testing was conducted independently by VeriTest, a testing service of Lionbridge Technologies.

In addition to meeting the Certification Requirement for joining the ISV / Software Solution Competency of the Microsoft Partner Program, successful completion of the test means that EnSite Safari Suite[®] 4 will be listed in the new Windows Server Catalog of Tested Products. This is Microsoft's online source for customers and partners to find hardware and software that is compatible with the Windows Server[®] 2003 family.
