EnSite Implements Producer Services for Midwest Energy Marketer

EnSite announces the implementation of specialized Producer Services operations for a large Midwest client engaged in energy marketing and portfolio management in the mid-continent region. The project represents another success in EnSite's ongoing initiative to pursue added value for clients by utilizing a combination of industry expertise and in-depth knowledge of the EnSite Safari Suite® system's potential to adapt to new operational demands.

For this project, EnSite's staff worked with the client to develop a configuration and utilization plan for managing the client's relationships with local natural gas production facilities within EnSite Safari Suite®. EnSite's analysts were successful in leveraging existing product functionality to meet this need. Using base system functionality for EnSite Safari Suite® Version 4.3 and EnSite's configuration plan, the client:

- Manages local producers as "Customers" in the product's CIS module; individual wellheads operated by a producer are managed as Accounts under the Customer.
- Assigns wellheads (Accounts) to Contracts, which control commodity charges the marketer will be responsible for remitting to the producer. In addition, Accounts are associated with models designed to calculate and manage complex third-party fees the marketer must remit on behalf of the natural gas producer.

This configuration plan effectively allows an energy marketer to partner with local producers by using EnSite Safari Suite® to manage pricing structures and produce pricing statements for commodity delivered to the Marketer from the field.

EnSite is very pleased at having completed this project in its entirety within a time frame of 10 weeks from kickoff to delivery. We will continue to pursue new opportunities for growth and efficiency in helping clients get the most from the EnSite Safari Suite® system and from their relationship with EnSite.
