The following news release is intended for distribution to EnSite clients and business partners. If you have any questions about the items contained in this release, please feel free to contact us at 888-901-5779 or safarisupport@ensite.com.

EnSite Advances Legacy Component Conversion for EnSite Safari Suite[®] Version 4

New Utility Meter Reads & Charges Screen will Feature Enhanced Functionality

In July of 2007 EnSite announced a major upgrade of its flagship energy management software, EnSite Safari Suite[®]. Our July Version 4 release featured a new Microsoft[®] .NET[™]-enabled platform offering heightened security and operational efficiencies, a new user interface, and a redesigned System Administration module.

Since that time, EnSite has released the new version to several clients, and has continued to refine the application's interface and operational features in Version 4.1, released in October. Today, EnSite announces that it has begun design work on the next legacy component to be converted for the Version 4 platform. Our business analysts are currently designing specifications for the rewrite of the Historical Meter Read screen based on a review of current functionality and a survey of client needs. The new version of the screen will be named the Utility Meter Reads & Charges screen. Like its predecessor, this screen will support entry, import and management of utility-supplied meter reads and transportation charges.

EnSite will continue in 2008 to identify top priority functionality that will most benefit clients when re-designed for and integrated into the new EnSite Safari Suite[®] Version 4 platform. Users will be notified through standard Release Notes as these innovations are released into the product.
