For Immediate Release

ENSITE LAUNCHES CORPORATE EXTRANET

Omaha, Nebraska - EnSite Incorporated, a leading provider of software solutions and transaction management services for energy companies and service providers, today announces the production launch of its corporate Extranet Web sites. Launched to Beta users earlier this year, the EnSite Extranet is now in full release and features individual client-centered Web sites accessible to enrolled client users.

Accessible from the company's public Web site at www.ensite.com, the Extranet operates on a foundational Web application developed by EnSite and registered under EnSite's VeriSign® security certificate for verifiable site identity and encrypted (SSL) access. The application allows EnSite Client Services to designate client-specific product enhancement and release data for availability on the Extranet from within TimeTrax, EnSite's proprietary in-house product management software and database. Over a secure Internet connection, authorized Extranet users can review in real time the latest TimeTrax data by designated EnSite Safari Suite® release for current and future release cycles. Additionally, EnSite Client Services can upload base system upgrade documentation and client-specific project documentation to the client Extranet site. These documents, also organized by EnSite Safari Suite® release, are available for client users to view or download.

"With the Extranet, EnSite is providing clients with on-demand access from any location to critical information specific to their releases," said Rod Bates, president of EnSite. "It will especially help mobile executives and remote users stay in sync with EnSite Client Services, and with their implementations of EnSite Safari Suite®, regardless of their physical location."

EnSite's Extranet is currently available in its first version release. Future plans for the application include an automated client issue submission feature and multiple end user security levels.

About EnSite Incorporated

Headquartered in Omaha, Nebraska, EnSite provides leading-edge software solutions and transaction management services in the restructuring energy marketplace. EnSite's hallmark application is EnSite Safari Suite®, which is unique in its approach to provide fully-integrated CIS and utility commodity management at the retail level. Since 1995, EnSite has built a diverse nationwide client base serving a range of commercial, industrial, government, institutional, and residential markets with multiple commodities and utility services. EnSite's extensive domain knowledge of energy, technology, and transaction processing ensure the unique business requirements of each client are met.
